

**Carlos Hernandez**  
**Web Developer**

Murfreesboro, TN | (615) 631- 0749 | CarlosHdzRco@gmail.com  
linkedin.com/in/carloshdzrco | github.com/CarlosHdzRco

## EDUCATION

---

**DigitalCrafts | Web Development Bootcamp | Remote | August 2022-November 2022**

**Middle Tennessee State University | B.S. Computer Science | Murfreesboro, TN | 2014 - 2019**

## SKILLS

---

Python, Javascript, HTML, PostgreSQL, Express, Node.js, Sequelize, React, Redux, Bootstrap, Postman, APIs, Git, Unit Testing, CSS

## RECENT PROJECTS

---

### **Chitter Chatter | Developer | Remote | October 2022**

- <https://chitterchatterchitterchatter.herokuapp.com> | [github.com/fionaeckert/fullstackproject](https://github.com/fionaeckert/fullstackproject)
- **Description:** A website where a user can sign up for an account and sign in with valid credentials. Once signed in they are able to see their information and change their bio as well as their avatar. From multiple API calls they are able to see job postings and tech articles.
- **Role:** My responsibility was to work on the backend section. If a GET endpoint was called I had to make sure the correct EJS templates would render. Using Sequelize and PostgreSQL I made sure what was being inserted into the database was valid for the specified column, as well as making checks that duplicate information was not inserted. I added a forgot password feature that allowed a user to reset their password if forgotten. When a user forgot their password a random alpha-numeric code would be generated and inserted into the database. Then only with matching email and code were they able to reset their password.
- **Tech stack:** HTML, CSS, JavaScript, Node.js, EJS, Express, SQL, PostgreSQL, Sequelize, Third-party APIs

### **Simply Foods | Developer | Remote | September 2022**

- [simplyfoods.netlify.app](https://simplyfoods.netlify.app) | [github.com/jorgerodriguez860/food-app](https://github.com/jorgerodriguez860/food-app)
- **Description:** A website where a user can add ingredients to their pantry and are able to look up recipes that contain what is in their pantry. They also have the option to look up a specific meal of the day and a category to find recipes that fit their chosen options.
- **Role:** My role was to figure out how to use the Spoonacular API to find the specific data that we were going to use. I worked on getting the input ingredients from the user, then making it appear in the pantry UI if it was a valid ingredient. The ingredient would then be added to the query of the API call. Using Bootstrap cards I was able to show the results on the page.
- **Tech Stack:** HTML, CSS, JavaScript, Bootstrap, jQuery UI, Third-party APIs

## PROFESSIONAL EXPERIENCE

---

### **Delicias Colombianas RR | Assistant Manager | Nashville, TN | 2014 - Present**

- Provided a high level of prompt and efficient customer service
- Resolved guest complaints promptly and professionally
- Worked as a member of the team to help achieve the team's goals
