SKILLS

Bilingual (Spanish), Python, Javascript, HTML, PostgreSQL, Express, Node.js, Sequelize, React, Redux, Bootstrap, Material UI, Semantic UI, Postman, APIs, Git, Unit Testing, CSS

PROJECTS

Citizenship Test Prep | **Developer** | **Remote** | **January 2022**
- **citizenshiptestprep.netlify.app** | **Frontend Github** | **Backend Github**
- **Description**: A website where someone preparing for the citizenship (naturalization) test can prepare, study and test themselves. The first section is to study with flashcards that flip from question to answer for all hundred questions. In this section there is a Spanish translation feature to understand the questions clearly as well as a text to speech feature to hear the pronunciation correctly. The second section is a multiple answer quiz of ten random questions. The backend of this project contains a database with all hundred questions including answers, translations, and incorrect answers.
- **Tech stack:** HTML, CSS, JavaScript, Node.js, Express, PostgreSQL, Sequelize, Third-party APIs

Events Hub | **Developer** | **Remote** | **November 2022**
- **eventshubapp.netlify.app** | **Project Github**
- **Description**: With Events Hub you are able to sign up for events or host your own events. Depending on what city you select you are able to see the events for a certain day on a map and sign up if you wish. If you are a host you can also create events on specific points on the cities map.
- **Role:** My role was to connect the frontend to the backend with various endpoints. I was responsible with using information from the database to set markers on the map and whenever a marker is clicked the correct info is displayed. I was also in charge of storing information in the database which included coordinates that Mapbox and React-Map-GL was able to use when searching for events.
- **Tech Stack:** Mapbox, React-Map-GL, React, PostgreSQL, Express, Node.js, Material UI, HTML, JS

SoccerInfo | **Developer** | **Remote** | **November 2022**
- **https://www.soccerinfoapp.com** | **Project Github**
- **Description**: Soccer Info is a platform where a user can choose one of the top league in Europe to check the standings, stats, and matches. The site features info from the top leagues around the world.
- **Role:** The whole project was done independently. This includes making and filtering correct API calls , Redux state management, setting up React Routes and designing with Semantic UI
- **Tech Stack:** React, Redux, HTML, CSS, JavaScript, API-Football API
